Any other details:

I need to be aware about how my game will work. For example, every time the player clicks on the card; what happens

if the cards match or mismatch and how much time the player needs.

I will worry about the way it looks because i need to make sure that the memory game functions properly.

Conclusion

This is my second project and hopefully creativity and simplicity will come into place because it is important to show how much i have learned and understood. This topic made me challenge myself to see how far i have done and what i have learnt.
